SERVICES

MAYBE IT'S TIME FOR A CHANGE?

Are you looking for a new health partner in your addiction recovery? At OARS, we believe every patient deserves to be cared for in a safe, supportive, and clinically excellent environment. We offer a one-of-a-kind recovery experience. To learn more, or to make your first appointment, CALL US AT 724-912-OARS (6277) OR VISIT US AT OARSMAT.COM.

PATIENTS

WE PRESCRIBE THESE MEDICATIONS:

- Subutex (Buprenorphine)
- Suboxone (Buprenorphine/Naloxone)
- Zubsolv (Buprenorphine/Naloxone)
- Sublocade Monthly Injections (Buprenorphine)
- Revia (Naltrexone)
- Vivitrol Monthly Injections (Naltrexone)

Please see the OARS Bucket Philosophy on the back

LET US CUSTOMIZE A TREATMENT PLAN FOR YOU:

- We offer weekly, biweekly and monthly appointments
- We accept all major insurances
- **We have the region's lowest fees - \$160 per month for self-payers**
- We coordinate all drug, alcohol and mental health consultations

EMPLOYMENT

Are you looking for a new opportunity in the opioid addiction field?

OARS was founded five years ago. We are growing fast and are in need of qualified and compassionate opioid addiction recovery staff.

OARS IS HIRING FOR ALL POSITIONS:

- Physicians
- Certified Registered Nurse Practitioners
- Front office staff - receptionists
- Medical Assistants
- LPN's and RN's
- Office Site Directors

TO LEARN MORE, CALL 724-912-OARS (6277)

THE OARS BUCKET® PHILOSOPHY

Opioid addiction is a complicated disease. The OARS Bucket makes it easier to understand. We use the Bucket to illustrate how opioid chemicals (narcotics) work on the brain and show how we help make recovery possible through evidence-based Medication Assisted Treatment (MAT) used with counseling and behavioral modification.

By Bryan Paul Negrini, MD, MPH
President and CEO, OARS

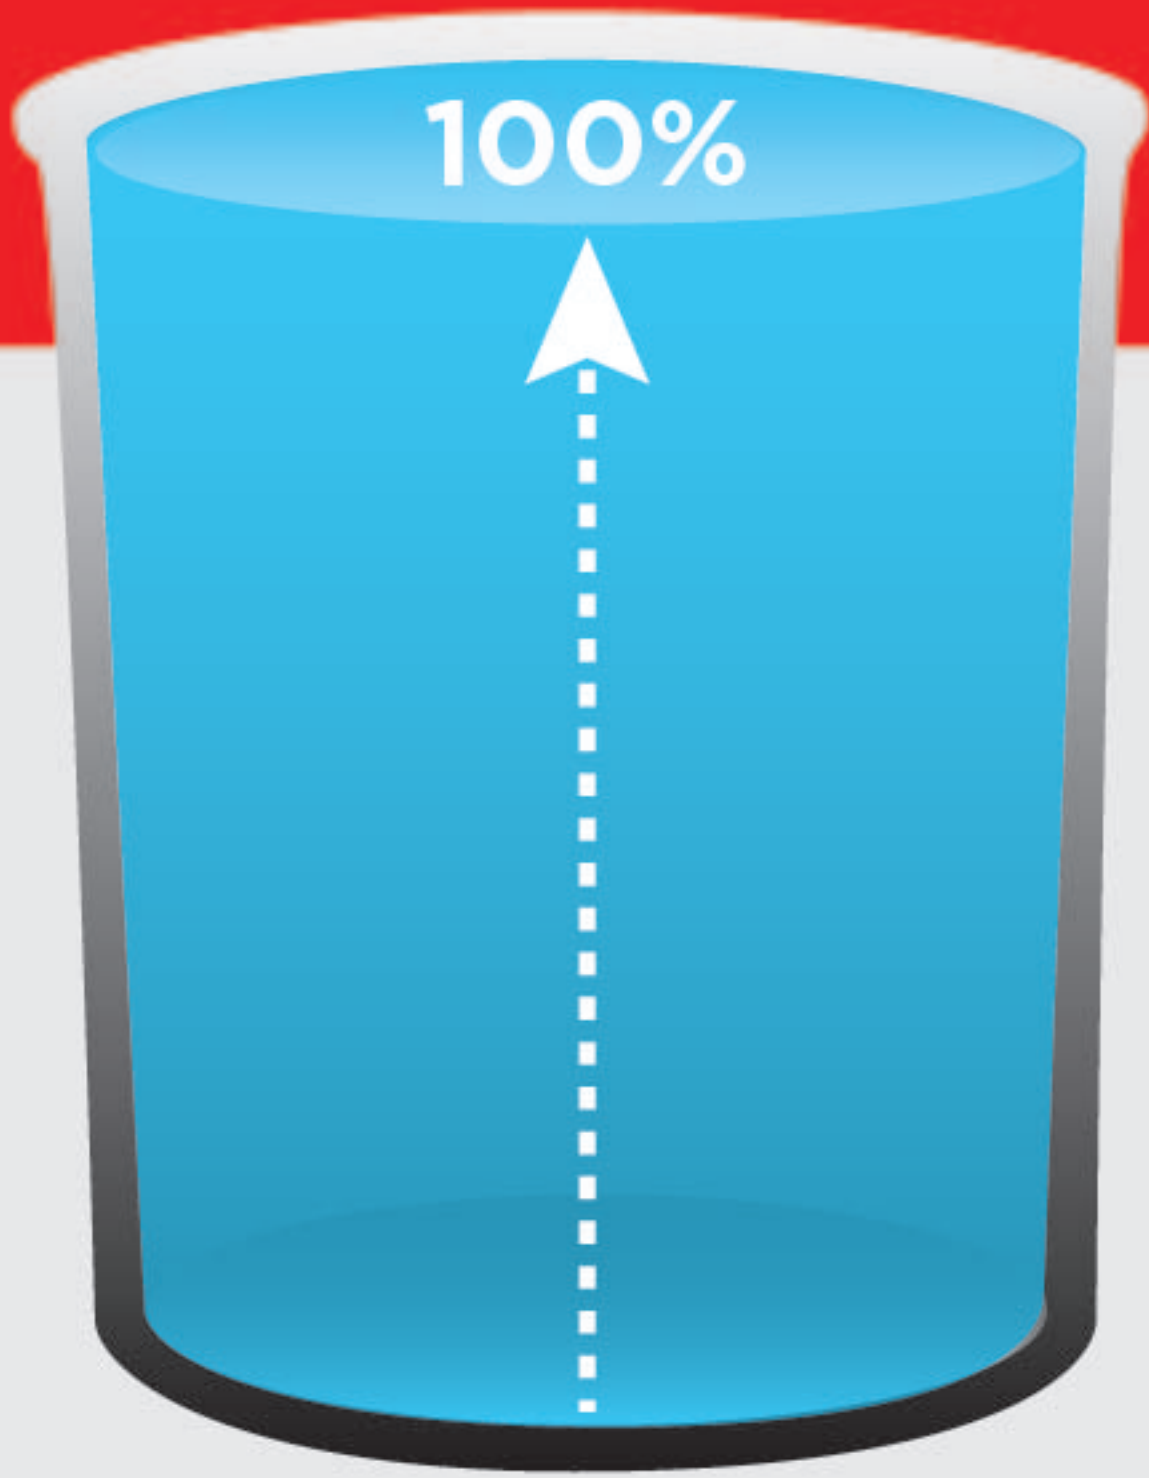

THIS IS YOUR BRAIN ON 3 TYPES OF OPIOIDS.

We all have natural opioid receptors in our brains that act like parking stations for opioid chemicals. Different opioids create different responses.

1 FULL OPIOID AGONISTS FULLY ACTIVATE OUR RECEPTORS

There's a reason people chase Full Opioid Agonists. They stimulate receptors up to 100%, releasing dopamine – the chemical in the brain that reduces pain, makes you feel good, and gives you that “high” that you chase.

When you take 100% opioids, your Bucket can fill to the top. If you overfill your Bucket, you can die of an opioid overdose.

“Stop playing opioid Russian roulette”

As your Bucket empties, you have to keep using more opioids, and keep refilling your Bucket, or you experience serious withdrawal symptoms. One 100% opioid can stack on another. For example, patients on Methadone are more likely to overdose if they take another 100% opioid.

THE 100% CLUB INCLUDES:

- Methadone - FDA approved for MAT
- Prescription opioids - Vicodin, Percocet, Opana, etc.
- Street opioids - Heroin, Fentanyl, etc.

WHAT'S TOLERANCE?

As you make a habit of using opioids, over time, your bucket grows. As your bucket grows, you need more opioids to fill the larger bucket to the same level. You need more to get the same effect.

WHAT'S REVERSE TOLERANCE?

As you use fewer opioids, over time, your bucket shrinks. This makes it easier to fill and overdose. This happens frequently after someone comes out of rehab or jail and uses the same amount of opioids they used before they went in.

WHAT'S AN OVERDOSE?

The more opioids you take, the more at risk you are of overdosing. With too many opioids, the bucket fills, the brain stem falls asleep, breathing stops, and if the opioids stay on the receptors, you die of an overdose.

2 PARTIAL OPIOID AGONISTS PARTIALLY ACTIVATE OUR RECEPTORS

Partial Opioid Agonists help prevent overdoses. They have a higher affinity for opioid receptors than the Full Opioid Agonists, and block them from entering the Bucket. They activate our receptors only up to 30% (approx.). Partial Opioid Agonists are **more closely** related to the normal agonists in our endogenous opioid system (i.e., endorphins and enkephalins) that activate our receptors from 0-10% at any given time.

To treat your addiction, we'll get your brain accustomed to using less narcotics.

“Feeling more normal, every day”

Using MAT, we'll empty your Bucket to 30%, and keep it from filling up again. You won't feel high, but you won't have withdrawal symptoms, either.

THE 30% CLUB INCLUDES:

- Buprenorphine products – FDA approved for MAT

Daily Sublingual Medications	Monthly Subcutaneous Shot
<ul style="list-style-type: none">• Subutex• Suboxone• Zubsolve	<ul style="list-style-type: none">• Sublocade

3 OPIOID ANTAGONISTS TOTALLY BLOCK OUR RECEPTORS

Opioid Antagonists attach even more tightly to our opioid receptors than Full Agonists or Partial Agonists. They shut down our receptors and completely block all other opioids from parking on them. They are **most closely** related to our normal and endogenous opioid system. They're an overdose's worst enemy.

Our ultimate goal is to reformat your brain chemistry to a normal of 0% external narcotics. To do this, we cap your Bucket with more MAT.

“Creating a life that's opioid free”

When no more unwelcome opioids are allowed in, you'll be one step closer to recovery.

THE 0% CLUB INCLUDES:

- Naloxone (Narcan)
- Naltrexone products: Revia and Vivitrol – FDA approved for MAT

Narcan lasts for **20 minutes**
Revia lasts for **1 day**
Vivitrol lasts for **1 month**
