

# STOP RIDING THE BUPRENORPHINE ROLLER COASTER

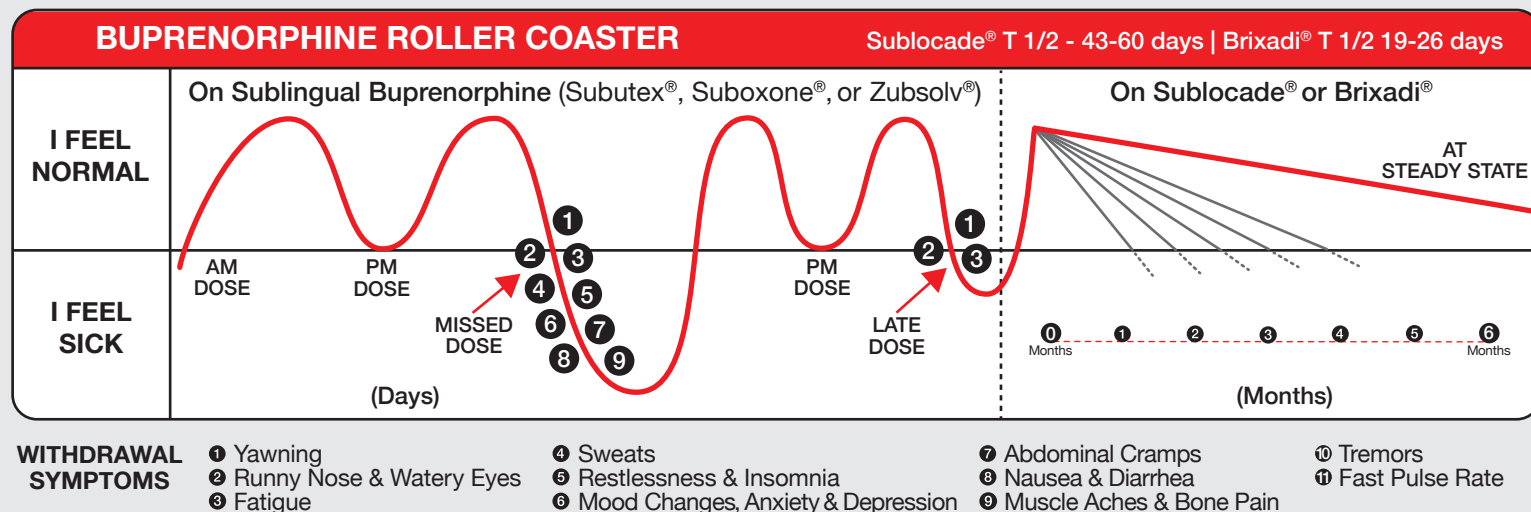

**RECOVERY** doesn't have to be a **roller coaster** of cravings and withdrawal symptoms. Life doesn't have to be a roller coaster of substance abuse crises and mental health challenges.

Take your recovery to the next level – and consistently protect yourself from overdose and uncertainty with a monthly Subcutaneous Buprenorphine Injection.

## GIVE SOME THOUGHT TO THE MONTHLY BUPRENORPHINE SHOT

Buprenorphine injections not only eliminate the ups and downs of chemical withdrawal, they break the addictive ritual of taking medications several times each day. The shot puts you more in control of your CRAVINGS and BEHAVIORS than ever before.

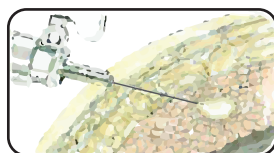

Wondering how quickly you can transition from daily sublingual to monthly injectable Buprenorphine? Is now too soon? You can transition to a monthly injection immediately, even if you took your sublingual medications today.

## THE CONFIDENCE OF MONTH-LONG DELIVERY

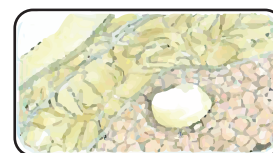

### 1. ADMINISTRATION

We'll inject the monthly Buprenorphine shot into your abdominal fat tissue. For about 10 seconds, you'll feel a mild burning sensation.

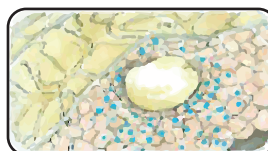

### 2. FORMATION

When the liquid Buprenorphine meets your body fluids, the delivery system forms a soft grape-like deposit of Buprenorphine inside the fat tissue.

### 3. CONTINUOUS RELEASE

The Buprenorphine shot immediately begins to deliver sustained levels of Buprenorphine. That means you'll be protected every minute of the day.

## NOTHING COMPARES TO MONTHLY SUBCUTANEOUS BUPRENORPHINE (SUBLOCADE® or BRIXADI®)

The monthly Buprenorphine shots have many **positives**<sup>1</sup>. Compare that with all the **negatives**<sup>2</sup> associated with Subutex® or Suboxone® or Zubsolv® tablets and films.

### POSITIVES OF THE MONTHLY BUPRENORPHINE INJECTIONS <sup>1</sup>

- Buprenorphine in a monthly convenient shot form
- Easy and quick to administer
- Month-long protection against cravings & withdrawal
- No more withdrawal ups & downs
- No discrimination at the pharmacy
- Helps eliminate the "user" habits
- Pure Buprenorphine, no Naloxone Allergies
- No bad taste
- No heartburn or dental problems
- No temptation to misuse or sell
- No target of theft
- No need to hide from children
- Makes weaning off easier

### NEGATIVES OF BUPRENORPHINE FILMS/TABLETS <sup>2</sup>

- Buprenorphine is often taken several times each day
- Difficult to take properly
- Doesn't offer continuous protection in between doses
- Frequent withdrawal ups and downs
- Subjects you to discrimination at the pharmacy
- Reinforces the "user" habits
- Suboxone® associated with Naloxone Allergies
- Tastes terrible
- May cause heartburn and dental erosion problems
- Temptation to misuse or sell
- Makes you a target for theft
- Unsafe to have around children
- Makes weaning off difficult
